

# 7 Reasons to Choose MMA

**Methyl methacrylate (MMA) is a great adhesive for part joining, gap filling, seam sealing and more! Read on to learn more about this useful technology.**

## Boost efficiency

Assemble faster, minimize finishing work, and cure at room temperature.

## Better designs

Use lightweight and dissimilar materials, distribute stress evenly, and optimize curing speeds and rheology.

## Lower production cycle times

Reduce surface preparation, apply easily, and shorten working times as strength builds quickly.

## Stronger structures

Build in strength with vibration and impact resistance, good gap fill, and high peel resistance.

## Lower assembly costs

Remove manufacturing steps and specialized labor requirements.

## Simpler bills of material

Bond most materials and eliminate fasteners.

## Safer assemblers

Avoid fastener-related hand injuries and dangerous isocyanate.
